Maintenance advice

Visage REHAU Windows & Doors

Visage REHAU windows and doors require very little maintenance, however here are a few tips to ensure that your new UPVC windows and doors retain their value and appearance.

Ventilation tips

Ventilation is important and provides air circulation within your home. Correct ventilation also reduces condensation.

- Open a window (be mindful of security).
- Fit a ventilation or extraction unit in the kitchen and bathroom.
- Fit wall vents to provide air flow.
- Trickle vents provide improved background ventilation whilst minimising heat loss.

Fitting maintenance tips

Preserving the mechanisms, locks and hinges is recommended to prolong the life of working parts of your window or door.

- All moving parts of fittings should be lightly oiled once or twice a year to ensure that windows and doors always open smoothly.
- Most fittings have a built-in adjustment facility, if your window or door begins to stick please contact your installer who can make the necessary adjustments.

Cleaning tips

Cleaning your new windows or doors is easy, but you should follow these tips to maintain the life and appearance of your product.

- Slightly dirty frames can be cleaned with warm water and washing up liquid.
- Abrasive cleaners and dry cleaning with a duster should be avoided.
- Cleaning solutions and polishes that contain solvents or thinners should not be used. Aggressive chemicals like these will attack the frame and seals.
